

Financial Management: Stock statement is required to be shown in every branch.

Scenario:

I have Multi-location setup with 1 HO and 2 Branches. How to setup the database in such a manner so that each branch would be able to see other branch stock and consequently would be able to return and exchange Product(s) in different branches?

Answer:

To achieve this goal we should share data of all branches with all other branches. Please Use the following steps...

Step 1: In HO

- Go to [Main Menu > Master Data Management > Inventory > Location Master \(M> I> L\)](#)
- Select **HO/Root**
- Press **Ctrl + N** in "**Data sending rule**" option
- Create a new Data sending rule as "**Ho to branches**"
- Go to "**Sync Data to**" fields
- Select all branches in all fields except HO
- Save

Step2: For Branch1

- Go to [Main Menu > Master Data Management > Inventory > Location Master \(M> I> L\)](#)
- Select **Branch1**
- Press **Ctrl + N** in "**Data sending rule**" option
- Create a new Data sending rule for branches as "**Branch1 to All**"
- Go to "**Sync Data to**" fields
- Select all branches and HO in all fields except Branch1
- Save

Step3: For Branch2

- Go to [Main Menu > Master Data Management > Inventory > Location Master \(M> I> L\)](#)
- Select **Branch2**
- Press **Ctrl + N** in "**Data sending rule**" option
- Create a new Data sending rule for branches as "**Branch2 to All**"
- Go to "**Sync Data to**" fields
- Select all branches and HO in all fields except Branch2
- Save

Now the data of all branches will travel to all other branches and you will be able to make a sale return entry for different branches.
